## Road Safety Audit

## Introduction

This Road Safety Audit (RSA) was initiated to address roadway safety issues in the study area with a primary emphasis on pedestrian safety and mobility, while also assessing the safety of other modes within the study area as they are interrelated. The study area is located in Los Alamos, NM along Trinity Drive (NM 502). The study limits include Trinity Drive between Oppenheimer Drive and 15th Street and includes the mid-block regions along Trinity Drive between Oppenheimer Drive and $15^{\text {th }}$ Street. Ashley Pond is a community park that hosts public gatherings and entertainment events and is included in the study area. The park was recently upgraded with improvements to drainage, electrical service, pond/fountain, and sidewalk/ pedestrian related enhancements.

A public dedication ceremony for the improvements was recently held at Ashley Pond to officially celebrate the new renovations and to re-open the public space. A public community building on the east side of Ashley Pond and the Los Alamos County (LAC) Justice Center west of Ashley Pond are also popular public facilities in the community.

Mid-block Pedestrian Count Location

## Study Context

## Existing Conditions

Trinity Drive (NM 502) through Los Alamos is a four- lane east-west principal arterial route with a continuous center left-turn lane, sidewalks and a curb and gutter section. The right-ofway width for NM 502/Trinity Drive is at least eighty feet and may be up to 100 feet. There is a horizontal curve on Trinity Drive located at Ashley Pond ( $20^{\text {th }}$ Street). There are no shoulders on Trinity Drive within the study area. 20th Street is a collector street to the north. To the south, $20^{\text {th }}$ Street dead ends into a parking lot for local businesses.

Street lighting along Trinity Drive is LED and is installed in a staggered layout along the corridor. There is not currently any lower level pedestrian focused sidewalk lighting in the study area.

Atomic City Transit (Route 1) provides free public bus service along Trinity Drive in the eastbound direction. Buses make a loop from Trinity Drive onto Central Avenue in the westbound direction. The bus headways (time between buses) are approximately 20 minutes during the weekday from 5:48 am to 7:08 pm. Bus stops are located along Trinity Drive in the eastbound direction at $15^{\text {th }}$ Street, $20^{\text {th }}$ Street and Oppenheimer Drive within the study area.

Businesses located on the south side of Trinity Drive include commercial land use such as motels, gas stations, an automobile service station, school administration facilities, a real estate office, and an adult day care center. There are residential developments located in the general area to the south of Trinity Drive at Oppenheimer Drive. The Los Alamos County (LAC) Justice Center is located along the north side of Trinity Drive adjacent to the west side of Ashley Pond.

Ashley Pond is an important community park and public gathering area that hosts special entertainment events regularly during the spring and summer months. During the summer there are weekly entertainment events on Friday nights. Public parking is located in designated parking lots west and southeast of Ashley Pond. Additional overflow parking during special events is located on the south side of Trinity Drive across from the Ashley Pond area.

Trinity Drive serves as a major access route for Los Alamos National Laboratory (LANL) traffic. On Trinity Drive, morning LANL traffic peak is in the westbound direction. For the pm or afternoon peak period, LANL traffic peaks in the eastbound direction as employees return home.

The intersection of Oppenheimer Drive and Trinity Drive at the west end of the study area is a signalized intersection. The intersection of 15th Street and Trinity Drive at the east end of the study area is also a signalized intersections. The intersection of Trinity Drive and 20th Street in the center of the study area is a two-way stop controlled intersection with stop control on 20th Street.

## Traffic Data Collection and Review

## Planned Future Development - Effects on Traffic

Conversion efforts related to the Community Center to a Teen Center on the east side of Ashley Pond on $20^{\text {th }}$ Street was occurring at the time of this study (May 2015). The Teen Center opened in the newly renovated community center during the fall of 2015. It is anticipated that traffic will increase in the area with the opening of the teen center. Also some teens are expected to ride the Atomic City bus (Route 1) which stops eastbound on the west side of $20^{\text {th }}$ Street to depart and arrive at the Teen Center. Route 1 also stops at the High School and the Aquatic Center.

LAC proposes a reconstruction of $20^{\text {th }}$ Street south of Trinity Drive for approximately 200 feet. The proposed typical section for the south leg of $20^{\text {th }}$ Street includes a two lane roadway with curb and gutter, a north bound left-turn lane at the intersection, parking on the east side, and five to six foot wide sidewalks on both sides. A preliminary plan has been developed and is included for reference in the appendix.

The north leg of $20^{\text {th }}$ Street at Trinity Drive was under construction at the time of the field review meeting in conjunction with the Teen Center renovations. This construction activity likely impacted the traffic operations temporarily until it was completed. Construction of this street segment was completed on October 9, 2015.

## Traffic Flow Data

Traffic data were obtained from a combination of sources for use in this study. ADT data for Trinity Drive (NM 502) were obtained from the NMDOT traffic count database and is shown below in Table 1.

Table 1. Average Daily Traffic on Trinity Drive NM 502) Milepost 0.7 to Milepost 1.72 (Junction with Oppenheimer Drive)

|  | Year 2013 | Year 2012 | Year 2011 |
| :--- | :---: | :---: | :---: |
| Eastbound Direction | 6705 | 6808 | 6830 |
| Westbound Direction | 6074 |  |  |
|  |  | 6167 | 6187 |
| Total | 12,779 | 12,975 | 13,017 |

## Source: NMDOT Traffic Count Database

Intersection turning movement counts (with classifications), were collected for the study. Los Alamos County (LAC) furnished and deployed cameras for traffic data collection. The cameras were deployed on Thursday, December 11, 2014 at three intersections as follows:

- $20^{\text {th }}$ Street and Trinity Drive (12-hour intersection turning movement counts from 6:00 am to 6:00 pm)
- $1^{\text {th }}$ Street and Trinity Drive (9-hour intersection turning movement count from 6:009:00 am, 11:00 am-2:00 pm, and 3:00-6:00 pm)
- Oppenheimer Drive and Trinity Drive (9-hour intersection turning movement count from 6:00-9:00 am, 11:00 am-2:00 pm, and 3:00-6:00 pm)

Table 2. Peak Hour Intersection Turning Movement Counts

|  | AM Peak Period | Noon Peak Period | PM Peak Period |
| :--- | :---: | :---: | :---: |
|  | Traffic Counts <br> (Peak Hour) | Traffic Counts <br> (Peak Hour) | Traffic Counts <br> (Peak Hour) |
| Oppenheimer <br> Drive/Trinity <br> Drive <br> $7: 30-8: 30$ <br> am | 1835 <br> $11: 00$ am to Noon | $4: 30-5: 30 \mathrm{pm}$ |  |
| 20 $^{\text {th }}$ Street/ | 1798 |  | 1815 <br> Trinity Drive |

| $\mathbf{1 5}^{\text {th }}$ Street/ | 1109 | 1795 | 1826 |
| :--- | :---: | :---: | :---: |
| Trinity Drive | 7:30-8:30 am | Noon $-1: 00 \mathrm{pm}$ | $4: 30-5: 30 \mathrm{pm}$ |

A majority of the southbound traffic ( $86 \%$ ) at $20^{\text {th }}$ Street and Trinity Drive is right turning traffic during the 11:00 am to 1:00 pm peak traffic period. With southbound left turning and southbound through movements, comprising a small percentage ( $14 \%$ ) of the peak hour volume at the intersection. The peak hour right turning flow distribution was slightly higher at ( $88 \%$ ).

## Vehicular Traffic Speed Data

A spot speed study was conducted along Trinity Drive on Thursday, December 11, 2014. A sample of 100 vehicles in the eastbound direction and 100 vehicles in the westbound direction were recorded during the 10:00 am-11:00 am time period. The $85^{\text {th }}$ percentile speeds are 37 mph for eastbound and westbound Trinity Drive. The speed limit on Trinity Drive within the study area is 35 mph .

## EXHIBIT 3

SPOT SPEED STUDY RESULTS FOR TRINITY DR. (9:50 AM TO 10:50 AM)

## Pedestrian and Bicycle Count Data

Pedestrian and bicycle counts were conducted for each of the three study area intersections concurrent with the vehicle turning movement counts. In addition, supplementary pedestrian counts crossing Trinity Drive were conducted for the mid-block regions west of $20^{\text {th }}$ Street and east of $20^{\text {th }}$ Street. The locations for the counts were determined based upon key points and perceived areas with significant pedestrian activity.

- Trinity Drive and $15^{\text {th }}$ Street (Pedestrian and Bicycle Counts)
o Conducted on Thursday, December 11, 2014
- (9-hour intersection count from 6:00-9:00 am, 11:00 am-2:00 pm, and 3:00 6:00 pm)
- Trinity Drive and $20^{\text {th }}$ Street (Pedestrian and Bicycle Counts)
o Conducted on Thursday, December 11, 2014
o Second count conducted on Thursday October 27,2015
- 12-hour intersection count from 6:00 am to 6:00 pm
- Trinity Drive and Oppenheimer Drive (Pedestrian and Bicycle Counts)
o Conducted on Thursday, December 11, 2014
- (9-hour intersection count from 6:00-9:00 am, 11:00 am-2:00 pm, and 3:00 - 6:00 pm)
- Trinity Drive (Mid-block) West of $20^{\text {th }}$ Street to approximately the LAC Justice Center, and area east of $20^{\text {th }}$ Street to approximately $1 / 2$ block west of $15^{\text {th }}$ Street. (Pedestrian Count only)
o Conducted on Thursday, December 11, 2014
- 11:00 am - 2:00 pm
- 3:00-6:00 pm
o Conducted on Friday, May 22, 2015 during a concert
- 6:00-10:15 pm

Table 3. Peak Hour Intersection Pedestrian Counts
December 11, 2014 (Trinity Drive/Oppenheimer Drive Intersection)
October 27, 2015 (Trinity Drive/20th Street Intersection)
December 11, 2014 (Trinity Drive/15 th Street Intersection)

|  | AM Period | Noon Period | PM Period |

| :--- | :---: | :---: | :---: |
| West leg crosswalk <br> (north/south) | 24 | $2(17)^{*}$ | 19 |
| Total Pedestrian count | 87 | $46(65)^{*}$ | 60 |
| Total Bicycle Count | 4 | $2(4)^{*}$ | 3 |

*Counts shown to the right in parentheses were the results from the second count conducted on Thursday, October 27, 2015; All other counts shown above in the table were the results from the first counts that were conducted on Thursday, December 11, 2014

Mid-block locations were selected for pedestrian counts, due to the context of the study area. Pedestrians congregate at Ashley Pond. Additionally, businesses south of Trinity Drive generate pedestrian traffic that cross Trinity Drive to go to restaurants in the Central Business District (CBD), particularly during the lunch periods from 11 am to 1 pm . In addition, Ashley Pond hosts weekly concerts during the spring and summer months. Overflow parking for these concerts is located south of Trinity Drive. Significant pedestrian traffic is generated during these events that cross Trinity Drive at un-controlled locations. For these reasons, two midblock locations were chosen for pedestrian counts, the region on Trinity Drive, west of 20 ${ }^{\text {th }}$ Street, and the region on Trinity Drive, east of $20^{\text {th }}$ Street.

| Count Total | 245 | 115 |

## Future Traffic Considerations

Los Alamos was recently designated with the Manhattan Project National Historic Park.
Planned facilities for the park include construction of a Visitor's Center. The new national park is projected to generate additional traffic to the study area. Estimated traffic was considered in this RSA as follows.
Approximately 77,000 to 80,000 visitors per year are estimated for the National Park based upon the assumption that a NPS Visitor's Center would generate similar traffic to the local (Bradbury Museum). Increases in vehicular traffic are projected in the vicinity and estimated as follows:

Table 8. Traffic Projections for the Manhattan Project National Park

| Quantity | Description |
| :---: | :--- |
| 80,000 | Estimated annual Visitors to Park |
| 250 | Estimated annual visitor weekdays |
| 50 | Estimated annual visitor Saturdays |
| 65,000 | Estimated annual weekday visitors |
| 15,000 | Estimated Annual Saturday Visitors |
| 260 Visitors | Estimated daily weekday visitors |
| Per Day (VPD) |  |
| 2 | Estimated individuals per vehicle |
| 130 | Vehicle trip ends** per day |

| Quantity | Description |
| :---: | :--- |
| 2 | Accesses into Visitor's Center |
| 4 enter/3 exit | Vehicles per hour Enter/Exit (10\% of <br> daily flow projected) |

Additional traffic is expected when the teen center opens in the vicinity of Trinity Drive and $20^{\text {th }}$ Street. It is anticipated that some additional trips on the Atomic City Transit Route 1 will occur between the Teen Center, Los Alamos High School, and the Aquatic Center in addition to added vehicular trips to and from the same sites.

A new traffic count was conducted and furnished by the study sponsor for use in this study. The traffic and pedestrian count was conducted on Thursday, October 27, 2015 after the opening of the teen center and completion of the construction on $20^{\text {th }}$ Street at Ashley Pond. The October 2015 traffic count was approximately $4.9 \%$ lower ( 14,942 vehicles) than the December 2014 traffic count ( 15,711 vehicles) during the 6:00 am to 6:00 pm traffic count period. While the traffic counts were lower during the October count as compared to the December 2014 count, the pedestrian counts were higher during the October 2015 count. There were 46 pedestrians counted during the December 2014 count period, while 65 pedestrians were counted during the October 2015 count, resulting in an increase of $41 \%$ over the same twelve hour (6:00 am to 6:00 pm) period.

Based upon discussion with LAC transit, it is anticipated that a new clockwise route by Atomic City Transit may be added to Route 1 in the near future. This new service may reduce the need for Central Avenue or Trinity Drive pedestrians crossing either arterial for trips originating and ending "inside" the Central-Trinity loop. Pedestrians would still be required to cross the major streets when the origin or destination is on opposite sides of the loop. (e.g., a trip originating at the High School (North of Central Avenue "outside" and ending at the new Teen Center "inside" the loop.

## ANALYSIS OF TRAFFIC CONTROL MEASURES

## $20^{\text {th }}$ Street and Trinity Drive Signal Warrant Review based on MUTCD guidance and standards.

An initial review of the warrants for a traffic signal using the Thursday, December 11, 2014 intersection turning movement count data was conducted for the $20^{\text {th }}$ Street and Trinity Drive (NM 502) intersection. A summary of the signal warrant review is provided below, while the detailed analysis review is provided in the appendix.

1. Eight-hour and Four-hour warrants: An initial review of existing conditions and proposed traffic conditions were reviewed for this warrant. Neither existing, nor future traffic projections satisfy either of the warrants. Detail is provided in the appendix.
2. Peak hour Warrant: (Major Street; Two lanes in each direction/Minor Street: Southbound two approach lanes ( 1649 vehicles per hour on the major street (Trinity Drive)/(162 vehicles
per hour on the minor street) (Southbound leg of 20 th Street); The Manual on Uniform Traffic Control Devices (MUTCD) indicates that when there is a significant proportion of right turns, engineering judgement may be used to subtract a portion of right turns from the minor street volume when applying the peak hour warrant criteria. Eighty-eight percent (142 vehicles per hour) were turning right (southbound to westbound) at the intersection during the peak hour. After observing site conditions, engineering judgement was used to subtract $1 / 4$ of the right turning volume for purposes of this warrant review. The peak hour warrant is not satisfied for the $20^{\text {th }}$ Street and Trinity Drive intersection. See appendix for more detail.

## Warrant 6 Coordinated Signal System

Support: Progressive movement in a coordinated signal system sometimes necessitates installing traffic control signals at intersections where they would not otherwise be needed in order to maintain proper platooning of vehicles

Issues related to progression/signal coordination and vehicle platooning on Trinity Drive was outside the scope and objective of this RSA. The primary focus and scope of the RSA was to consider pedestrian safety, operation, and mobility, while also considering safety of other modes such as vehicles and bicycles. A more detailed progression and coordination study could be conducted in the future to evaluate progression and platooning on Trinity Drive. LAC recently completed a signal progression/coordination study for Trinity Drive.

The 20th/Trinity intersection is not halfway between the intersections of Oppenheimer and 15th Street. The intersection (20thStreet and Trinity Drive) is 0.26 mile from Oppenheimer Drive and 0.16 mile from 15th Street ( 0.42 mile total distance). The non-symmetrical intersection spacing could present challenges to providing two-way traffic progression and optimal platooning of traffic on Trinity Drive. A new study, if conducted should consider the effects using a timespace diagram or similar analysis for new signal at 20th Street along Trinity Drive.

Therefore, Warrant 6 is not applicable at this time.

## Warrant 8 Roadway Network

Support: Installing a traffic control signal at some intersections might be justified to encourage concentration and organization of traffic flow on a roadway network
A. Trinity Drive qualifies as part of the Los Alamos traffic network and is a major arterial. It is clear that existing traffic is heavily concentrated on Trinity Drive. The signalized network on Trinity Drive is currently a coordinated signal system maintained by LAC.
B. 20th Street does appear to be a primary street and does not provide significant connectivity through Los Alamos and does not qualify as part of part of the Los Alamos roadway as network. 20th Street does not provide connectivity as it terminates south of Trinity Drive and to the north at Central Ave.

Therefore Warrant 8 is not satisfied or applicable for this intersection.
3. Other Signal Warrants: Other warrants were reviewed and are not applicable or not satisfied for the intersection.

## Sight Distance

The NMDOT Access Management Guidelines (Table 18.F-1, pg. 87) indicates that the desirable Stopping Sight Distance (SSD) for a roadway with a 35 mph posted speed limit with grades from $-3 \%$ to $+3 \%$ is 250 feet. For a 30 mph speed limit, the stopping sight distance is 200 feet (for $-3 \%$ to $+3 \%$ grades). The SSD guidelines should be considered in the design and construction of any of the countermeasures recommended in this RSA.

The SSD was reviewed for eastbound vehicles on Trinity Drive west of the $20^{\text {th }}$ Street horizontal curve to $20^{\text {th }}$ Street. The SSD exceeds 250 feet as measured from "Google Earth". The northwest corner of the intersection was under construction at the time of the field review meeting and SSD could not be assessed for the westbound direction. It is recommended that the intersection be re-evaluated to determine if the post-constructed conditions provide adequate sight distance at the intersection.

## EXHIBIT 4

LOOKING WEST ALONG TRINITY DRIVE FROM THE NORTH LEG OF $20^{\text {TH }}$ STREET

## Pedestrian Hybrid Beacon (PHB) Warrant Review based on MUTCD Guidelines

A Pedestrian Hybrid Beacon (PHB) is a special type of hybrid beacon used to warn and control traffic at an unsignalized location to assist pedestrians in crossing a street or highway at a marked crosswalk. A PHB may be considered for installation to facilitate pedestrian crossings at a location that does not meet traffic signal warrants, or at a location that meets traffic signal warrants, but a decision is made not to install a traffic signal.

The warrant for a Pedestrian Hybrid Beacon (PHB) is a minimum of twenty (20) pedestrians per hour (pph) crossing Trinity Drive which is considered the major street and the width of the pedestrian crossing. The area total peak hour pedestrian count crossing Trinity Drive including the mid-block area just to the west of $20^{\text {th }} \mathrm{St}$. is 9 pph . The PHB warrant was reconsidered for
the new data received on in October 2015. Even though pedestrian traffic was higher, the warrant was still not satisfied.

## Rectangular Rapid Flash Beacon

Rectangular Rapid Flash Beacons (RRFB) are relatively new treatments options used in conjunction with pedestrian crosswalk signs that provide a flash indication to motorists when pedestrians have activated a pedestrian call to cross at the crosswalk. RRFBs can be used on two-lane and multi-lane roadways. RRFBs have been shown to increase vehicle yielding and reduce the incidence of multiple-threat crashes at crosswalks on multi-lane roads (i.e., crashes where a vehicle in one lane stops to allow a pedestrian to cross the street while a vehicle in an adjacent lane, traveling in the same direction strikes the pedestrian). Generally studies indicate for RRFBs vehicles stop 80 percent of the time.

## Crash Data Collection and Analyses

Crash data for the years (2008 to 2014) were provided by Los Alamos County (LAC) crash records department. The observed crash frequency (OCF) (Exhibit 5) for the study area is 31 crashes over seven years or about 4.5 crashes per year on average. There were nine crashes in 2009 which had the highest crash frequency during the study period.

The predominant crash type was parking related crashes off of the public roadway and therefore did not occur on Trinity Drive, which accounted for nine (9) crashes or nearly one third of the crashes in the study area (Exhibit 6). The second highest crash type recorded were rear end crashes at the signalized intersection of Trinity Drive and Oppenheimer Drive and Trinity Drive and $15^{\text {th }}$ Street. Rear end crashes that occurred at the signalized intersections accounted for seven (7) crashes or nearly $25 \%$ of the total.

There were two (2) pedestrian-vehicle crashes at the intersection of Trinity Drive and Oppenheimer Drive in 2011, resulting in injuries to the pedestrians. There was one pedal cyclist crash in Year 2009, which resulted in an injury to the pedal cyclist. Overall, the crash analysis indicated that there were no fatal crashes, six injury crashes, and 29 property damage only crashes during the study period.

## EXHIBIT 5

OBSERVED CRASH FREQUENCY FROM OPPENHEIMER DRIVE TO $15^{\text {TH }}$ STREET

## EXHIBIT 6

CRASH SUMMARY BY TYPE

## Field Observations and Recommended Countermeasures

The following key findings resulted from the study. The recommendations are presented below in Table 9. Field Observations and Recommended Countermeasures.

Table 9. Field Observations and Recommended Countermeasures

| Field Observation | Recommended Countermeasure | Example/Comment or photo of Existing Conditions |
| :---: | :---: | :---: |
| 1. Sidewalks and ADA sidewalk ramps at intersections and driveways do not meet current Public Right-of-Way and Accessibility Guidelines (PROWAG). Sidewalks are adjacent to Trinity Drive travel lanes in some sections of the study area. | Reconstruct sidewalks and ADA ramps to provide 5 FT to 6 FT minimum desired width with a 6 FT landscaped buffer in areas with available right-of-way width and ADA sidewalk ramps to meet current PROWAG guidelines. | Deficient Sidewalk ramp at curb return |
| 2. Perceived lack of adequate crossing gaps for vehicles and pedestrians. Free-flow vehicles on Trinity Drive conflicts with pedestrians crossing Trinity Drive at $20^{\text {th }}$ Street, or with vehicles on $20^{\text {th }}$ Street crossing Trinity Drive, or vehicles turning onto Trinity Drive from $20^{\text {th }}$ Street. <br> (Alternative 1) | A traffic signal warrant review was conducted for the intersection of $20^{\text {th }}$ Street and Trinity Drive. Warrants were reviewed and it was determined that they were either not satisfied or applicable to the site. The peak hour warrant was reviewed as follows: <br> The peak hour distribution of traffic for southbound $20^{\text {th }}$ Street has $88 \%$ right turns. The MUTCD warrant guidance indicates that engineering judgement should be used to subtract a proportion of right turning traffic movements from the warrant as right turns have a lesser need for a traffic signal than left or through movements. After visiting the site and observing site conditions, engineering judgement was used to subtract $1 / 4$ of the right turning volume for purposes of this warrant review. <br> The intersection traffic conditions do not satisfy any of the warrants for installation of a traffic signal at this time. |  |

| Field Observation | Recommended Countermeasure | Example/Comment or photo of Existing Conditions |
| :---: | :---: | :---: |
| 3. Perceived lack of adequate gaps for pedestrians crossing Trinity Drive at $20^{\text {th }}$ Street. (Alternative 2) | A Pedestrian Hybrid Beacon (PHB) and marked crosswalk mid-block west of $20^{\text {th }}$ Street was reviewed. The lower threshold for pedestrian crossing flow is 20 pedestrians per hour (pph) based upon MUTCD warrant criteria for a Pedestrian Hybrid Beacon. The mid-block peak hour pedestrian crossing volume west of $20^{\text {th }}$ Street was 9 PPH. There were 13 pedestrians (October 2015 pedestrian count) crossing Trinity Drive at $20^{\text {th }}$ during the peak hour. |  |
| 4. Perceived lack of adequate gaps in traffic on Trinity Drive for pedestrians crossing (north/south) in the vicinity of $20^{\text {th }}$ Street and Trinity Drive <br> Designated Mid-block crosswalk concept | Install a raised median on Trinity Drive at Ashley Pond directly adjacent to the monument/2201 Trinity Drive. (see left for sketch/concept) The raised median could be approximately 200-300 feet in length. Install a marked crosswalk, signage per MUTCD and ADA compliant ramps at the sidewalk/ crosswalk junction. Supplemental LED pavement lights for the crosswalk and RRFBs should be considered to enhance the warning for vehicles that there is a designated pedestrian crosswalk. See pg. 25 for supplemental recommendations associated with RRFB installation (See No. 9 (part 3) and No. 15 below for related recommendation). As RRFB installations are considered by the FHWA to be experimental, approval by the FHWA is necessary before installation. See more details below ${ }^{* *}$ <br> For a mid-block location, pedestrian crosswalk signs and RRFBs could be installed in the median and along the right side of the roadway in both the eastbound direction and the westbound direction of Trinity Drive. The design engineer should consider whether advanced signing and warning is needed for the westbound direction, east of the existing horizontal curve. The RRFBs must shall be designed and installed in accordance with FHWA's Interim Approval requirements. (or final approval if available at the time of design) |  |

## Summary and Conclusions

This study consisted of a Road Safety Audit (RSA) along Trinity Drive (NM 502) from Oppenheimer Drive to $15^{\text {th }}$ Street in Los Alamos, NM. The RSA was initiated to specifically consider pedestrian safety, mobility and operations in the study area in addition to other modes of transportation as they are inter-related. The following conclusions are offered.

Safety improvement recommendations include constructing sidewalk upgrades in the study area consistent with the Public Right-of-way and Accessibility Guidelines (PROWAG). The suggested safety countermeasures also provide opportunities to improve pedestrian safety for pedestrians that cross Trinity Drive at non-designated locations during special events or during routine weekday noontime peak hours. Making pedestrian push buttons more accessible for ADA at both signalized intersections is recommended.

The RSA team recommended that signal warrants be reviewed for installation of a traffic signal at $20^{\text {th }}$ Street and Trinity Drive. A review of the signal warrants indicates that the peak hour traffic warrant is not currently satisfied. Other warrants such as the four-hour volume and eight-hour volume warrant are not currently satisfied based upon the initial review. The crash warrant was not satisfied for the intersection. However, with the County's economic development initiative with the land purchase and splitting of property south of Trinity and $20^{\text {th }}$ Street, signal warrants should be reviewed once again considering additional trips generated with proposed retail and commercial business.

1. A new traffic count(s) (vehicle-pedestrian-bicycle) conducted by the sponsor during the peak summer or fall timeframe was recommended by the RSA workshop team at the $20^{\text {th }} /$ Trinity Intersection (Intersection Turning Movement). These counts were conducted, received and incorporated into the RSA in October 2015.
2. The traffic counts were approximately $4.9 \%$ lower in October 2015, when compared to traffic counts conducted in December 2014. While traffic counts were lower, pedestrian counts were $52 \%$ higher. Bicycle counts were similar in both counts.
3. Conduct an Intersection Capacity Study (Level of Service) at the intersection of $20^{\text {th }}$ Street and Trinity Drive for two-way stop controlled intersection (existing traffic control) and as a signalized intersection.
4. In the future, if a signal becomes warranted at the Trinity Drive and $20^{\text {th }}$ Street intersection, it is recommended that a study be conducted to evaluate and incorporate the signalized
intersection into LAC's coordinated signalized network on Trinity Drive to maintain acceptable progression on Trinity Drive.
5. Consider conducting a detailed evaluation/feasibility study for a Road Diet on Trinity Drive (NM 502) using Highway Capacity Manual (HCM) and Highway Safety Manual (HSM) techniques. The evaluation/feasibility study should consider the addition of bicycle lanes on Trinity Drive to provide designated lanes for bicyclists to help alleviate the usage of the sidewalks by bicyclists (as noted in Field Observation \# 11, page 19).

In conclusion, a summary of the recommended countermeasures are provided below along with relative costs of the countermeasures (low cost $\$$, medium cost $\$ \$$, and high cost \$\$\$)

Table 10. Summary of the Recommended Countermeasures and Relative Cost

| Relative Cost | Time frame | Recommended Countermeasure |
| :---: | :---: | :---: |
| \$ | S | Conduct a supplemental traffic count (completed) |
| \$ | S | Install median refuge island and marked crosswalk at the Ashley Pond/Trinity Drive location |
| \$ | S | Reduce speed limit/enforcement |
| \$ | S-M | Incorporate access management to reduce driveway conflicts (turning movement restrictions with geometric improvements) |
| \$ ${ }^{\text {d }}$ | S-M | Sidewalk ramp improvements, pedestrian countdown and audible pedestrian indications at intersections |
| \$ ${ }^{\text {d }}$ | M | Construct bus pull-outs in appropriate locations |
| \$\$ | M | Supplementary Route 1 bus route in clockwise direction |
| \$-\$\$\$ | S-L | Public Outreach/Enforcement/Temporary Traffic control and supplementary parking during special events |
| \$\$\$ | L | Reconstruct sidewalks, provide buffers, and ADA ramps in areas of sufficient right-of-way |
| \$\$\$ | L | Install a traffic signal and incorporate into LAC coordinated signal system on Trinity Drive (future consideration) |
| \$\$ | L | Install a Pedestrian Hybrid Beacon and marked crosswalk (Future consideration) |
| \$\$\$ | L | Road Diet or other changes to the typical section on Trinity Drive for multi-modal safety and operational considerations |

$S=$ short-term time frame for implementation of countermeasure
$\mathrm{M}=$ medium-term time frame for implementation of countermeasure
$\mathrm{L}=$ long-term time frame for implementation of countermeasure

## **Rectangular Rapid Flashing Beacon (RRFB) Additional Recommendation prior to Implementation

The FHWA will grant Interim Approval for the optional use of the RRFB as a warning beacon to supplement standard pedestrian crossing or school crossing signs at crosswalks across uncontrolled approaches to any jurisdiction that submits a written request to the Office of Transportation Operations. (Ref: FHWA Memorandum MUTCD - Interim Approval for Optional Use of Rectangular Rapid Flashing Beacon (IA-11, July 16, 2008). A state may request Interim Approval for all jurisdictions in that State. Jurisdictions using RRFB under this Interim Approval must agree to comply with the technical conditions detailed below, to maintain an inventory list of all locations where the devices are placed, and to comply with Item F at the bottom of Page 1A-6 of the 2003 MUTCD, Section IA. 10 which requires:
"An agreement to restore the site(s) of the Interim Approval to a condition that complies with the provisions in this Manual within 3 months following the issuance of a Final Rule on this traffic control device. This agreement must also provide that the agency sponsoring the Interim Approval will terminate the use of the device or application. The FHWA's Office of Transportation Operations has the right to terminate the interim approval at any time if there is an indication of safety concerns."

It is recommended that NMDOT submit the above written request to the Office of Transportation Operation to obtain approval prior to implementation of the RRFB at this location and for other future uses of RRFBs by NMDOT or local jurisdictions in New Mexico.

## Appendices

A) FIELD MEETING AGENDA

E) ATOMIC CITY RT 1 ROUTE MAP
F) LAC TYPICAL SECTION CONCEPTS FOR TRINITY DRIVEAND 2OTH STREET ATTACHED

## MEETING AGENDA

## Road Safety Audit (Trinity Drive from Oppenheimer Drive to $15^{\text {th }}$ Street)

DATE: Thursday, July 23, 2015
TIME: $\quad 9: 00 \mathrm{am}-2: 00 \mathrm{pm}$
LOCATION: Los Alamos County Police Department Training Room (2500 Central Ave.)
Introductions and Meeting Kick-off (9:00 am - 9:30 am)
Overview, training, and orientation
Objectives and format for the day
Study Background and Perspectives (9:30 am - 10:00 am)
Context and Setting
Los Alamos County Traffic Operations, Public Works
NMDOT (GO and D5)
Atomic City Transit
Local Law Enforcement
LANL

## Data Collection Summary and Discussion (10:00 am - 10:45 am)

Traffic, Speeds, Pedestrians and Bicycles, Operations and Geometrics
Transit, Special Events, Night-time and Lighting, Special Users (Older Adults)
(Young Adults/Teens)
Field Review (10:45 am- 11:45 am)
Team to walk the project study area; (Please bring and wear reflective safety vests)
Lunch (11:45-12:45)

## Post Field Review follow-up Summary Discussion (1:00 pm -2:00pm)

Objective is to develop findings, obtain initial comments, receive suggestions and buy-in from RSA team and discuss next steps
sign in. $\qquad$

B) WORKSHOP SUMMARY

A summary of the RSA workshop is provided below. The summary is divided into three parts, Presentation Notes, Field Review Notes and Summary Findings.

## Presentation Notes:

1. Consider Manhattan National Park Designation and Visitor's Center
2. Consider Teen Center relocations and future demand in new location on $20^{\text {th }}$ Street, east of Ashley Pond. The existing community center building is being renovated to become the new teen center. The teen center is expect to be complete and open in September 2015.
3. City working with NPS to establish visitor's center in teen center.

Ashley Pond
Fuller Lodge
Bradbury Museum
Crossing to DOE use shuttle
4. Teen Center complete in the fall of 2015; Street End of September
5. New bus stops planned at 20 street side of Trinity Dr.
6. Atomic City Transit: A new service is going to be added to Route 1 to provide a route in the clockwise direction. ACT is interested in exploring the addition of bus pull outs with ADA accessible bus stops.
7. Discussions have taken place with NM Park and Ride. Park and Ride location may move stop to north side of Trinity on west side of Ashley Pond.
8. Los Alamos has active cycling population; there is a need for cycling facilities.
9. As part of teen center, two new crosswalk crossings on $20^{\text {th }}$ are planned.
10. The City is developing and acquiring $\mathrm{r} / \mathrm{w}$ on $20^{\text {th }}$ Street east side to south side plan ( 60 ft . r/w)
11. r/w on Trinity Dr. $80-100 \mathrm{ft}$.
12. Consider park services estimate of traffic for roundabout study.
13. Will pedestrian volumes be higher in the summer? Will bicycle traffic be higher?
14. Consider a supplemental traffic/pedestrian/bicycle count in September to capture seasonal variation in traffic. (LAC may conduct more)
15. Current teen center has $60+$ users at one time.
16. Recreational use?
17. The speed limit on Trinity Drivees 35 mph .
18. Is the speed limit ( 35 mph ) appropriate for downtown location? $85^{\text {th }}$ percentile speeds are 37 mph .
19. Transit will add service and decrease headways to 15 minutes.
20. NCRTP (North Central Regional Transit District
21. Police (Crash breakdown) not accurate. (Have many more non reportable)
22. Police will provide non-reportable

## Field Notes:

ADA ramps inadequate (Oppenheimer and Trinity Dry)
Push buttons not located properly

Upgrade pedestrian signals to countdown and audible
Curb sidewalks undesirable
Drive at gas station not ADA compliant eastbound lighting may be marginal
City does plow sidewalks
5 ft . sidewalks. What if widen 3 feet
Possible property owner dedication of space.
Look at access management
Add islands
Look at road diet. Evaluate capacity
Traffic consideration. Traffic calming
Supplementary lower level pedestrian lighting
All individuals First Adult facility cross center.
Site/state requirements be part of bldg. Use park for farmers market Min 3 times/????
May have need for audible pedestrian crossings in area.
$\underline{20^{\text {th }} \text { Street (Collector) }}$
County plans to acquire full $\mathrm{r} / \mathrm{w}$ to south to provide connectivity
Plan for infill of south area.
Good place for disabled to cross
Sight distance at intersection an issue
Consider bus pull outs

## East

On south side; challenging access management for Left turns out of Sonic and Chili Works. There is an overlapping conflict between the two, particularly during peak hour.

ADA lacking.
R/w limited for sidewalk offset
Noted 3+ pedestrians/ 1 bike
Bus stops (on south side not pull outs)
Look for specific locations to include bus pull-outs
Bike use 50\% road/ Bike use 50\% street.
$15^{\text {th }}$ Street
Push buttons not accessible
Current ramps no longer compliant
Driveways not ADA compliant
Sidewalk has uneven slabs (4' sidewalks)
20 th Signal??
West to add park and ride stops in Justice center.
Los Alamos Complete Streets (ordinance??)
Review Comments

Can work be staged? Can other funding be used?
Long-term
Intermediate
Short-term

Oppenheimer Drive/Trinity Drive is the oldest traffic signal in Los Alamos.
Overall: Wrap-up meeting was a review of stakeholder comments and field review. With few exceptions, all recommendations were accepted. Most exceptions related to need to conduct another study of pedestrians in Oct. and action item to check signal at 20th satisfied MUTCD warrants; and if so, NMDOT still has signal program.

An additional comment; based upon field observations, pedestrian and bicycle volumes exceeded those counted in December 2014 study. Thus seasonal variation is clearly a factor.

20th Street and Trinity Dr.
Also it is important to consider added future traffic due to additional NPS visitors expected upon opening of Visitor's Center. Teen usage and development of south 20th Street including a diversion of existing traffic to $20^{\text {th }}$ Street from Driveway. (e.g. Los Alamos School Administration/ school site.

Note: Review of Warrant 3 Peak hour indicates with major street volume of over 160+/- and 2 lane on Side Street and major 150 vph is lower threshold of side street volume. $20^{\text {th }}$ and Trinity Drive could satisfy Warrant 8 . Roadway Network. $20^{\text {th }} \mathrm{St}$. is a collector in downtown area, at a logical location on? Trinity Network in terms of signal spacing.
$20^{\text {th }}$ Street/Trinity Dr.
Signal Warrant
Signal Spacing
Discuss Seasonal Variation
For the Special Event. Consider Additional Traffic control/enforcement. Cones/Speed Reduction parking
$20^{\text {th }}$ Street/Trinity Signal Warrant Investigation
Special Event. Increased law enforcement flagger control. Cones one lane parking. With controlled crossing.

## 20th Street and Trinity Drive Signal Warrant Analysis

Warrant 1. Eight-Hour Vehicular Volume No
Warrant 2. Four-Hour Vehicular Volume No
Warrant 3. Peak Hour No
Warrant 4. Pedestrian Volume No
Warrant 5. School Crossing n/a
Warrant 6. Coordinated Signal System No
Warrant 7. Crash Experience No
Warrant 8. Roadway Network N/a
Warrant 9. Intersection Near a Grade Crossing N/a

| Warrant 2. Four Hour Warrant |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Hour |  | Trinity D <br> (Major) |  | 20th Street (Minor) | Satisfied |
| 6:00-7:00 | 276 | 183 | 459 | 41 | No |
| 7:00-8:00 | 571 | 471 | 1042 | 85 | No |
| 8:00-9:00 | 474 | 562 | 1036 | 69 | No |
| 9:00-10:00 | 421 | 510 | 931 | 70 | No |
| 10:00-11:00 | 459 | 575 | 1034 | 63 | No |
| 11:00-noon | 602 | 1074 | 1676 | 119 | Yes |
| noon-1:00 | 826 | 823 | 1649 | 162 | Yes |
| 1:00-2:00 | 717 | 607 | 1324 | 109 | No |
| 2:00-3:00 | 540 | 616 | 1156 | 90 | No |
| 3:00-4:00 | 471 | 777 | 1248 | 82 | No |
| 4:00-5:00 | 512 | 1031 | 1543 | 78 | No |
| 5:00-6:00 | 595 | 956 | 1551 | 59 | No |
| Threshold |  |  | Varies | Varies |  |
| Two hours fall above the threshold line |  |  |  |  |  |
| One hour is near the threshold line (borderline) |  |  |  |  |  |
| Remaining hours are below the threshold line |  |  |  |  |  |
| Therefore Warrant 2. Four-Hour Vehicular Volume Warrant is not satisfied. |  |  |  |  |  |

| Warrant 3. Peak Hour Warrant |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Major 826 | Major <br> 823 | Minor <br> 162 | Satisfied |  |
|  |  |  | 142 | Rt Turn |  |
|  |  |  | 20 | Lt Turns |  |
|  |  |  |  | Straight |  |
| Min Threshold | 1800 |  | 150 |  |  |
| 0\% Reduction (Minor) | 1649 |  | 162 | Yes | (Borderline) |
| 25\% Reduction (Minor) |  |  | 127 | No |  |
| 33\% Reduction (Minor) |  |  | 115 | No |  |
| 50\% Reduction (Minor) |  |  | 91 | No |  |
| 67\% Reduction (Minor) |  |  | 67 | No |  |
| 75\% Reduction |  |  | 56 | No |  |
| A reduction of the right turning volume was considered and recommended based upon context. Siight distance for right-turing vehicles was obsered in the field and observed to be sufficient A very small number of crossing vehicles were counted that would benefit from a signal If south side develops and crossing traffic increases or $S$ leg traffic grows considerably, then re-evaluate |  |  |  |  |  |
| Therefore Warrant 3. Peak Hour Warrant is not satisfied. |  |  |  |  |  |

## Warrant 5. Pedstrian Volume

The minimum threhold is 133 pph . The threshold exceeds the peak hour for pedestrins crossing Trinity Dr. The peak pedestrain hour for pedestrian count on Oct. 27, 2015 is used below:

|  | Eastbound <br> Leg $(n / s)$ | Westbound <br> Leg $(n / s)$ |
| :--- | :---: | :---: |
| 6:00-7:00 | 0 | 0 |
| 7:00-8:00 | 0 | 0 |
| 8:00-9:00 | 0 | 4 |
| $9: 00-10: 00$ | 0 | 0 |
| $10: 00-11: 00$ | 1 | 0 |
| $11: 00-n 00 n$ | 0 | 0 |
| noon-1:00 | 1 | 0 |
| $1: 00-2: 00$ | 0 | 0 |
| 2:00-3:00 | 2 | 10 |
| $3: 00-4: 00$ | 0 | 1 |
| 4:00-5:00 | 1 | 2 |
| 5:00-6:00 | 0 | 0 |
| Peak hour=12 pph<133 |  |  |

Therefore Warrant 4. Pedestrian Volume Warrant is not satisfied.

Warrant 6. Coordinated Signal System is not applicable Warrant 7. Crash Experience is not satisfied
Warrant 8. Roadway Network is not applicable
Warrant 9. Intersection Near a Grade Crossing is not applicable

## ATOMIC CITY TRANSIT SYSTEM MAP - LOS ALAMOS

|  |  |  |  |
| ---: | :---: | :---: | :---: |

Atomic City Transit routes connect with the NCRTD Los Alamos route at the Transit Center each mid-day M-F. Visit www.ncrtd.org to view NCRTD schedules.

## Non-Discrimination Policy

The Incorporated County of Los Alamos does not discriminate on the basis of race, color, religion, sex, age, national origin, sexual orientation or gender identity, disability, genetic information, or veteran status in employment or the provisions of service. To find out more about our non-discrimination obligations or to file a complaint, please contact the Los Alamos County Human Resources Division at 662-8040.

## Design Recommendations

trinity

EXISTING CONDITIONS

| SUMMARY - OPTION A |  |
| :--- | :---: |
| Overall Streetscape Width | $80^{\prime}$ |
| Flowline/travel width | $58^{\prime}$ |
| Ped Crossing width | $58^{\prime}$ |
| Ped Refuge | $n 0$ |
| NEGATIVE FEATURES |  |
| Long ped crossing width |  |
| Narrow sidewalk (6' pref) |  |
| Narrow landscape (8' pref) |  |
| POSITIVE FEATURES |  |
| No easements required |  |
| Adds landscape buffer |  |
| Sidewalk wider than existing |  |
| CONSIDERATIONS |  |
| Travel lanes narrower than standard |  |
| Where ROW is sub $80^{\prime}$, sidewalk and <br> landscape may need to be narrowed |  |
| Street trees overhang travel lanes |  |

OPTION B - north sidewalk in ROW, south in easement

| SUMMARY - OPTION B |  |
| :---: | :---: |
| Overall Streetscape Width | $86^{\prime}$ |
| Flowlinetravel width | $60^{\prime}$ |
| Ped Crossing width | 23-34' |
| Ped Refuge | yes |
| NEGATVE FEATURES |  |
| Easement required on south |  |
| Narrow ped refuge ( $3^{\prime}$ ) |  |
| Narrow landscape on south (8' pref) |  |
| POSITIVE FEATURES |  |
| Adds median and ped refuge |  |
| Adds landscape buffer |  |
| Wider sidewalks |  |
| Considerations |  |
| Travel lanes narrower than standard |  |
| 6' landscape on south could be expanded if larger easement acquired |  |
| Street trees overhang travel lanes |  |

| SUMMARY - OPTION C |  |
| :--- | :---: |
| Overall Streetscape Width | $92^{\prime}$ |
| Flowline/travel width | $64^{\prime}$ |
| Ped Crossing width | $24-37^{\prime}$ |
| Ped Refuge | yes |
| NEGATIVE FEATURES |  |
| Easement required north and south |  |
| Narrow ped refuge (3') |  |
| Impacts to existing developments - <br> both north and south |  |
| POSITIVE FEATURES |  |
| Adds median and ped refuge |  |
| Adds landscape buffer at pref width |  |
| Wider sidewalks at pref width |  |
| Standard travel and turn lane widths |  |
| CONSIDERATIONS |  |
| evaluate 92' wide corridor impacts |  |
| walk and landscape width could vary <br> depending on property owner |  |
| Street trees overhang travel lanes |  |

## Design Recommendations

 \begin{tabular}{|l|l|}
\hline Flowline/travel width <br>
\hline

 

\hline Ped Crossing width <br>
\hline FEATURES/CONSIDERATIONS <br>
\hline
\end{tabular}

| FEATURES/CONSIDERA |
| :--- |
| Buffers both sides | | Maximizes parking |
| :--- | Trees in bulb-outs only

Sidewalks both sides

| SUMMARY - OPTION B |  |
| :--- | :--- |
| Flowline/travel width | $58^{\prime}$ |
| Ped Crossing width | $58^{\prime}$ |
| FEATURES/CONSIDERATIONS |  |
| Buffers from north parking |  |
| Street trees in grate continuous |  |
| Parking both sides |  |
| Sidewalks one side only |  |

existing conditions 15 th to 4th

## 

| SUMMARY - OPTION A - 15th to 4th |  |
| :--- | :---: |
| Flowline | $38^{\prime}$ |
| Ped Crossing width | $22^{\prime}$ |
| FEATURES/CONSIDERATIONS |  |
| Sidewalk meets min preferred |  |
| Requires shift of flowline $1^{\prime}$ |  |
| Trees in bulb-outs only per existing |  |
| Travel lanes less than standard width |  |

OPTION A - 15th to 4th - reduced travel lanes/wider sidewalk

20th to 15 th
central

| SUMMARY - 20th to 15th |  |
| :--- | :---: |
| Flowline (per existing) | $38^{\prime}$ |
| Ped Crossing width (per existing) | $24^{\prime}$ |
| FEATURES/CONSIDERATIONS |  |
| Simplify amenity zone placement |  |
| Maximize sidewalk both sides |  |
| Landscape buffer - parking lots near 15th |  |
